The Zanette Prefabbricati showroom

Zanette Prefabbricati has been successfully present on the market of industrial prefabrication for thirty years.

The company's commitment to on-going research has resulted in adding new finishes to its products that are capable of satisfying

almost any customer request. Zanette Prefabbricati makes a showroom area available where the designer can choose the type and colour of marble or stone suitable for the work to be done. This research involves various types of professional expertise

in a real brainstorming of ideas. It is very important to use miniatures to combine door and window frames, flashings, main doors, etc.

The Zanette Prefabbricati's premises: a laboratory of ideas.

The Zanette Prefabbricati products can be actually touched in our showroom so that the sensations that originate from the various, constantly evolving finishes can be directly perceived.

The facade finishes are also supported by using special pieces such as rounded corner elements, corner stones, fake grouting, cornices, etc.

The Zanette Prefabbricati technical staff collaborates in developing your project by sourcing customised solutions that are increasingly more focused on utmost functionality and that are accurate to the smallest detail to guarantee high product quality at fair prices.

Technologies made available for the designer.

All the production phases

are followed up by skilled personnel and computerised control systems that guarantee the normal production process.

The Quality System.

Zanette Prefabbricati has adopted a strict quality system for all the phases: design, production, assembly and after-sales service. All the products are manufactured following the regulations prescribed by the laws in force and each product can be traced in time.

Energy savings.

Zanette Prefabbricati has always abided by the latest regulations and even produces insulating cladding panels in various thicknesses offering insulating features that include soundproofing and heat insulation.

INDOOR CONCRETE WALL IN VARIOUS THICKNESSES

INSULATION IN VARIOUS THICKNESSES AND DENSITIES

EXTERNAL CONCRETE OR MARBLE-CEMENT COMPOSITE WALL

Production lines and setting departments.

Modern systems and advanced technologies are employed on all the production lines.

The setting departments for cladding panels are all sheltered to favour a more balanced setting and ensure delivery even on rainy or cold days.

In-house production cycle and customer service.

Facade finishes, waxing and protective treatments.

The cladding panels can have protective treatments applied to their surfaces that guarantee high and durable performances while not detracting from the beauty of the finish.

Transport and installation.

Zanette Prefabbricati has its own vehicles to guarantee the delivery of all its prefabricated elements to the worksites.

The after-sales customer service one of Zanette Prefabbricati's basic strengths. Thanks to its highly-specialised personnel and to the use of suitable vehicles, the company can quickly reach worksites.

Washed

Washed finish with marble or selected gravel typical of river pebbles.

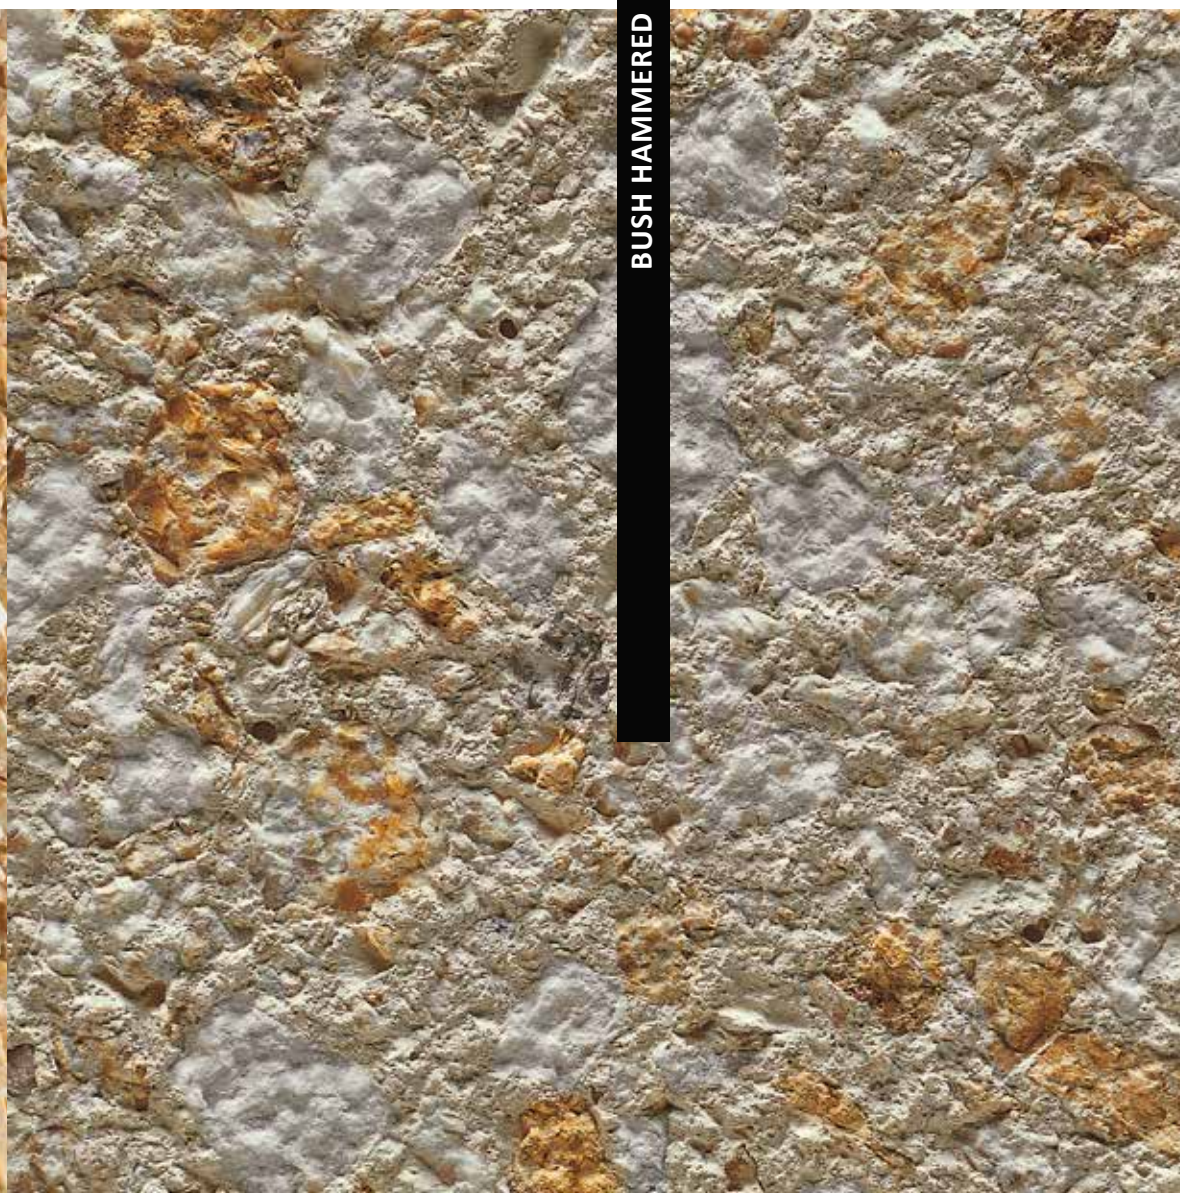

Bush hammered

This is a traditional finish that was common in bygone days. Bushhammering makes the surfaces of buildings eco-compatible even in areas subject to specific landscape constraints.

Facade finishes for cladding panels.

WASHED

BUSH HAMMERED

Cristal

A cladding panel finish that has a greater shine compared to other finishes available on the market. Thanks to the use of tested products, durable effects and shades can be obtained.

Antique

This finish is obtained thanks to a technology that gives the marble stone a rounded finish while polishing it. Antique has been registered as a European patent.

Special finishes

The on-going technological development focused on sourcing continuously new solutions for cladding panels results in Zanette Prefabbricati producing

a constant flow of prototypes that are tested in research laboratories. It is normal for Zanette Prefabbricati to use moulds or bricks, marble or stone slabs as well as wood or glass.

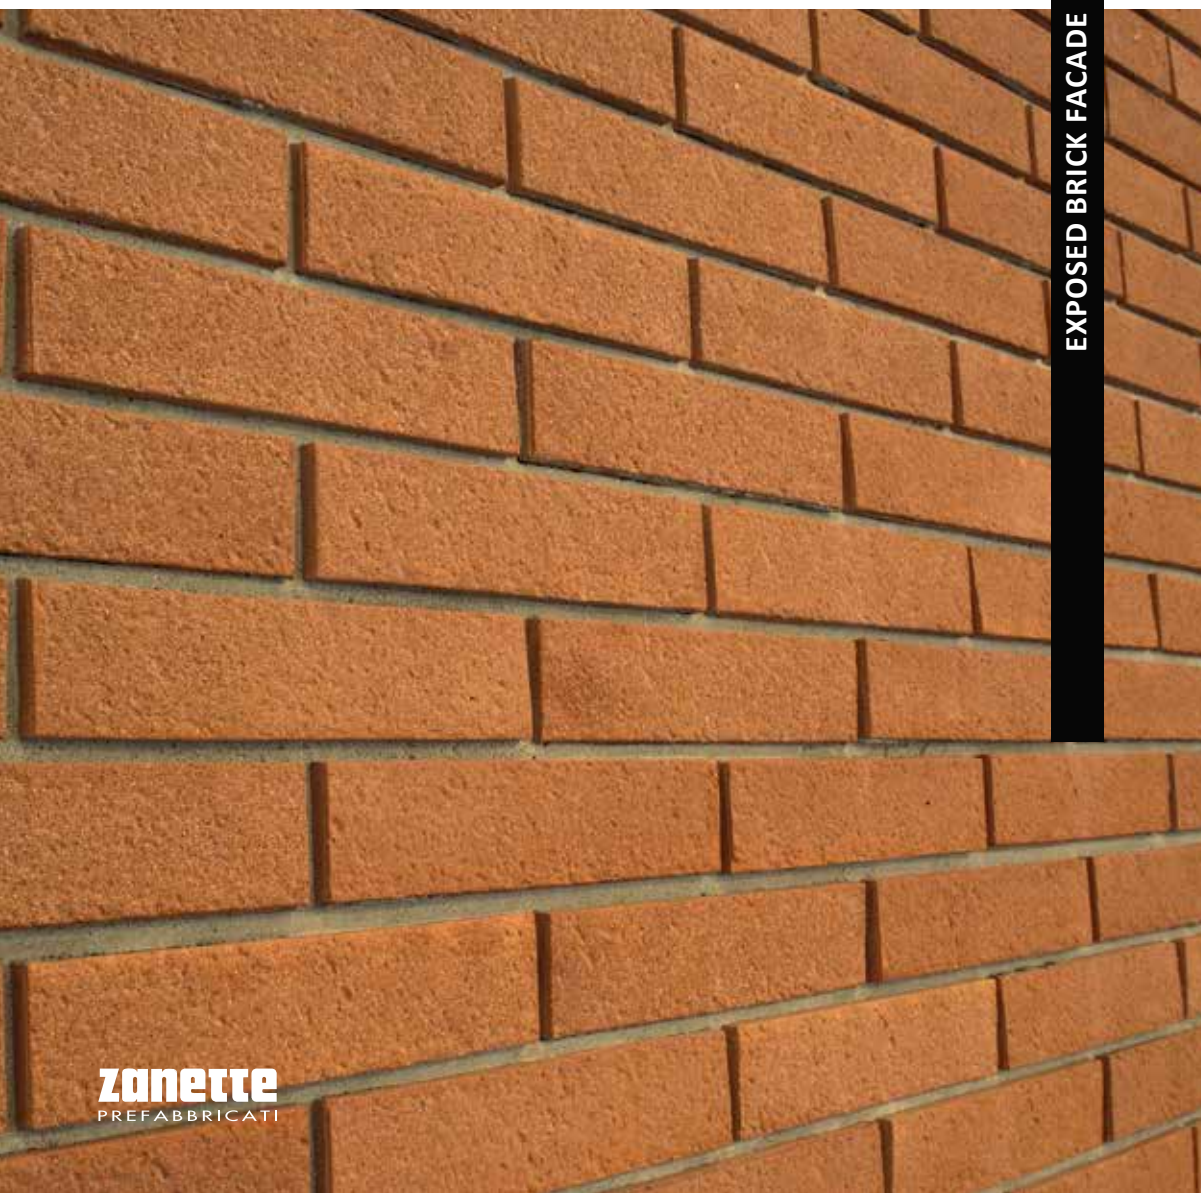

Exposed brick facade

Finish with manual application of the exposed bricks on the facade.

Rock

By using moulds it is possible to obtain the effect of natural stone while maintaining ease of installation.

Facade finishes for cladding panels.

EXPOSED BRICK FACADE

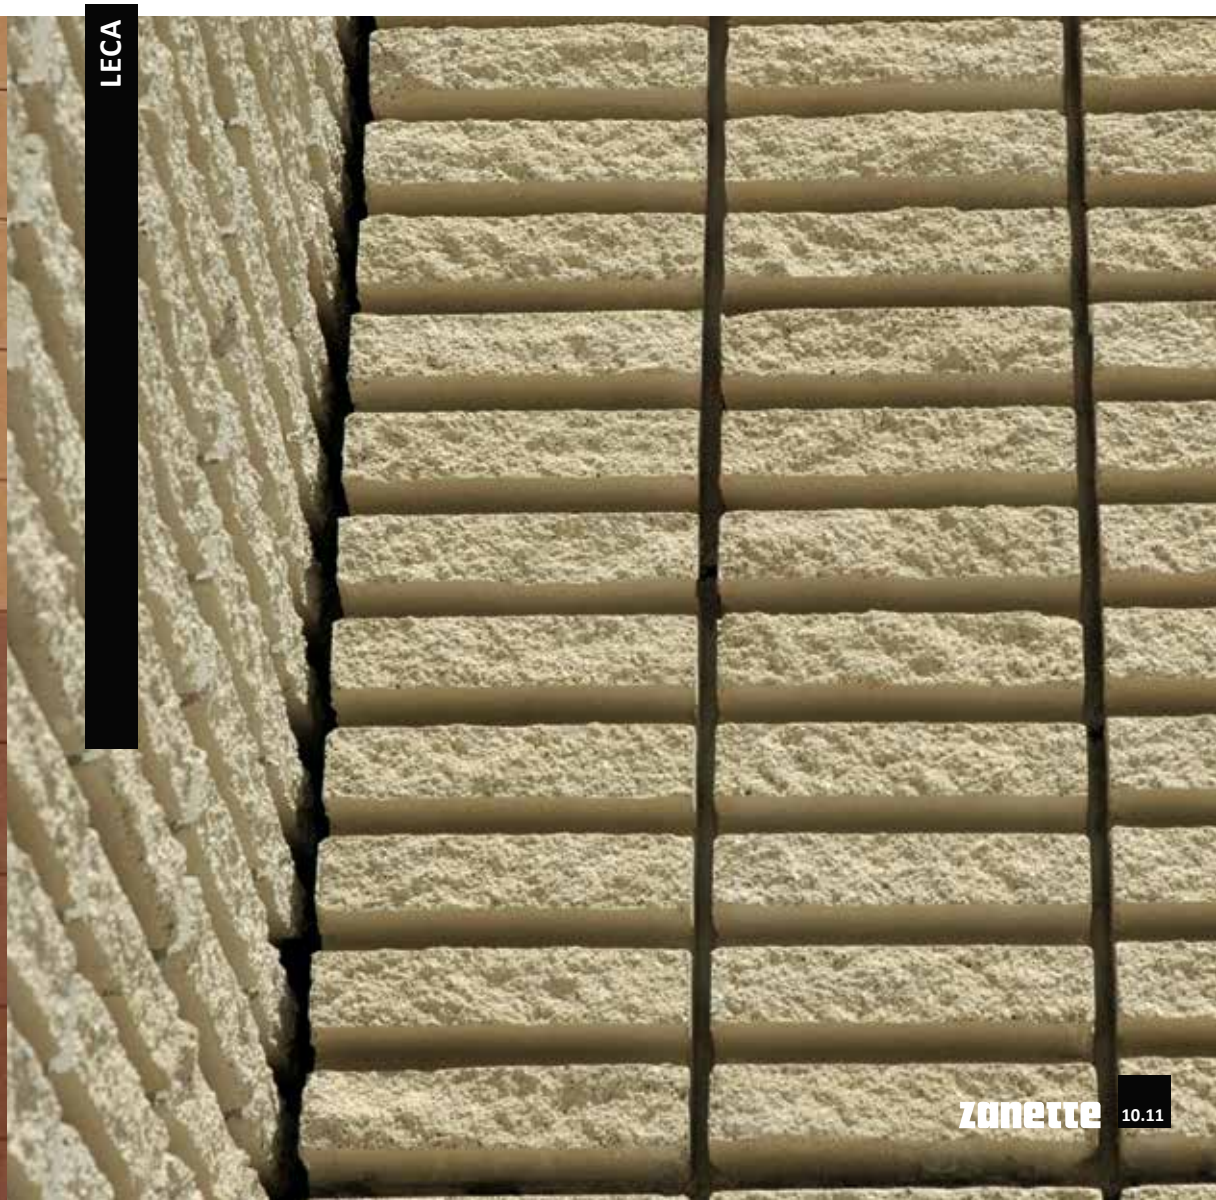

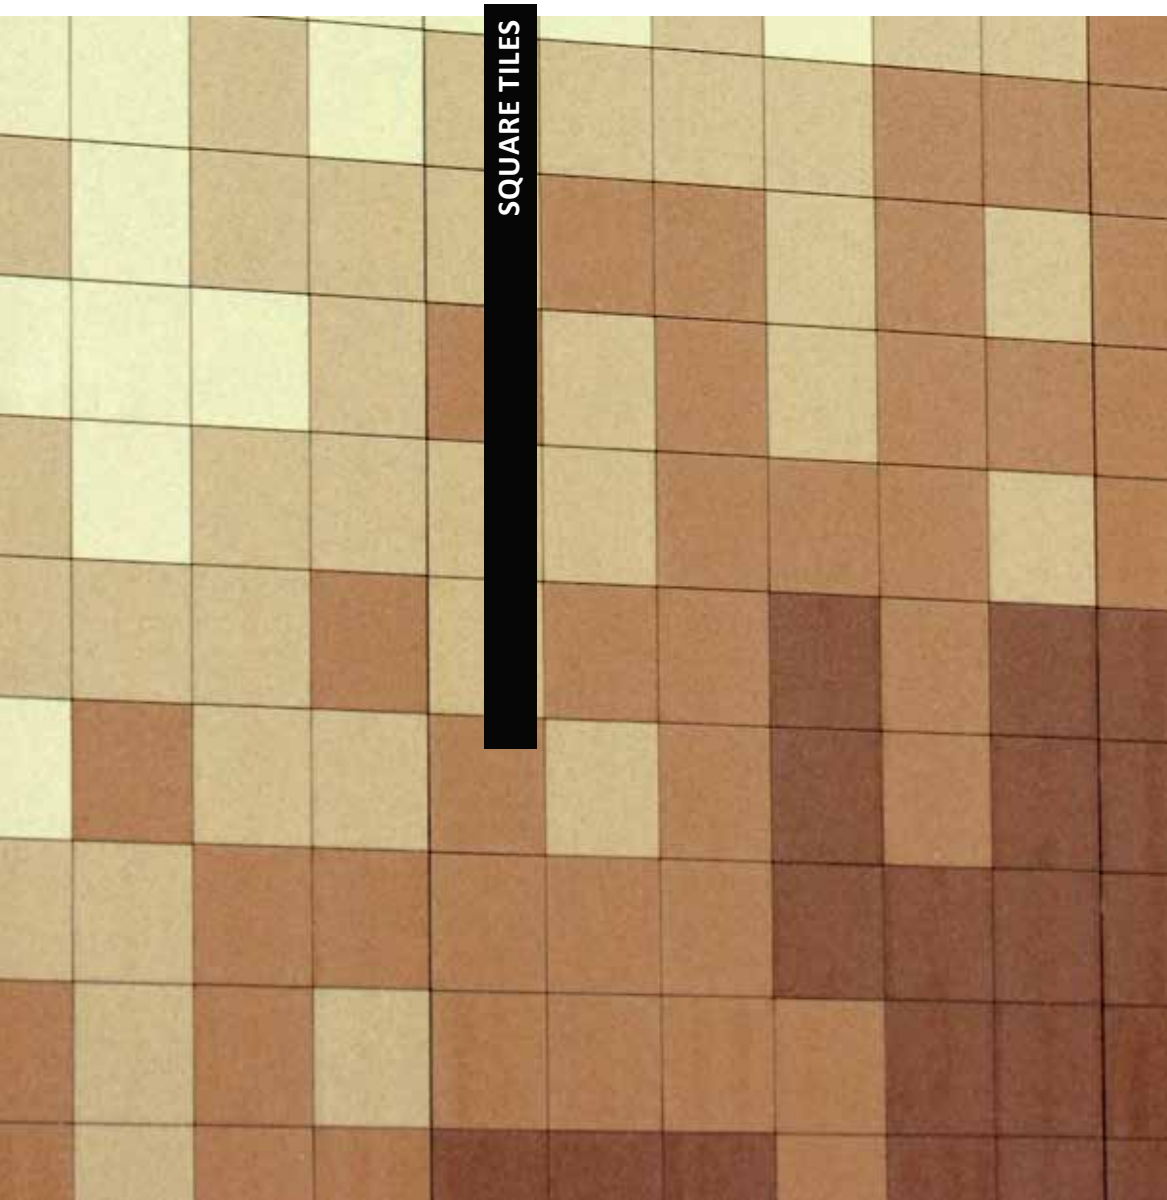

ROCK

Square tiles

By using square tiles in marble or marble-cement composite it is possible to combine various colours to obtain customised results.

Leca

The Leca block offers high sound absorption and heat insulation. It is available in various colours.

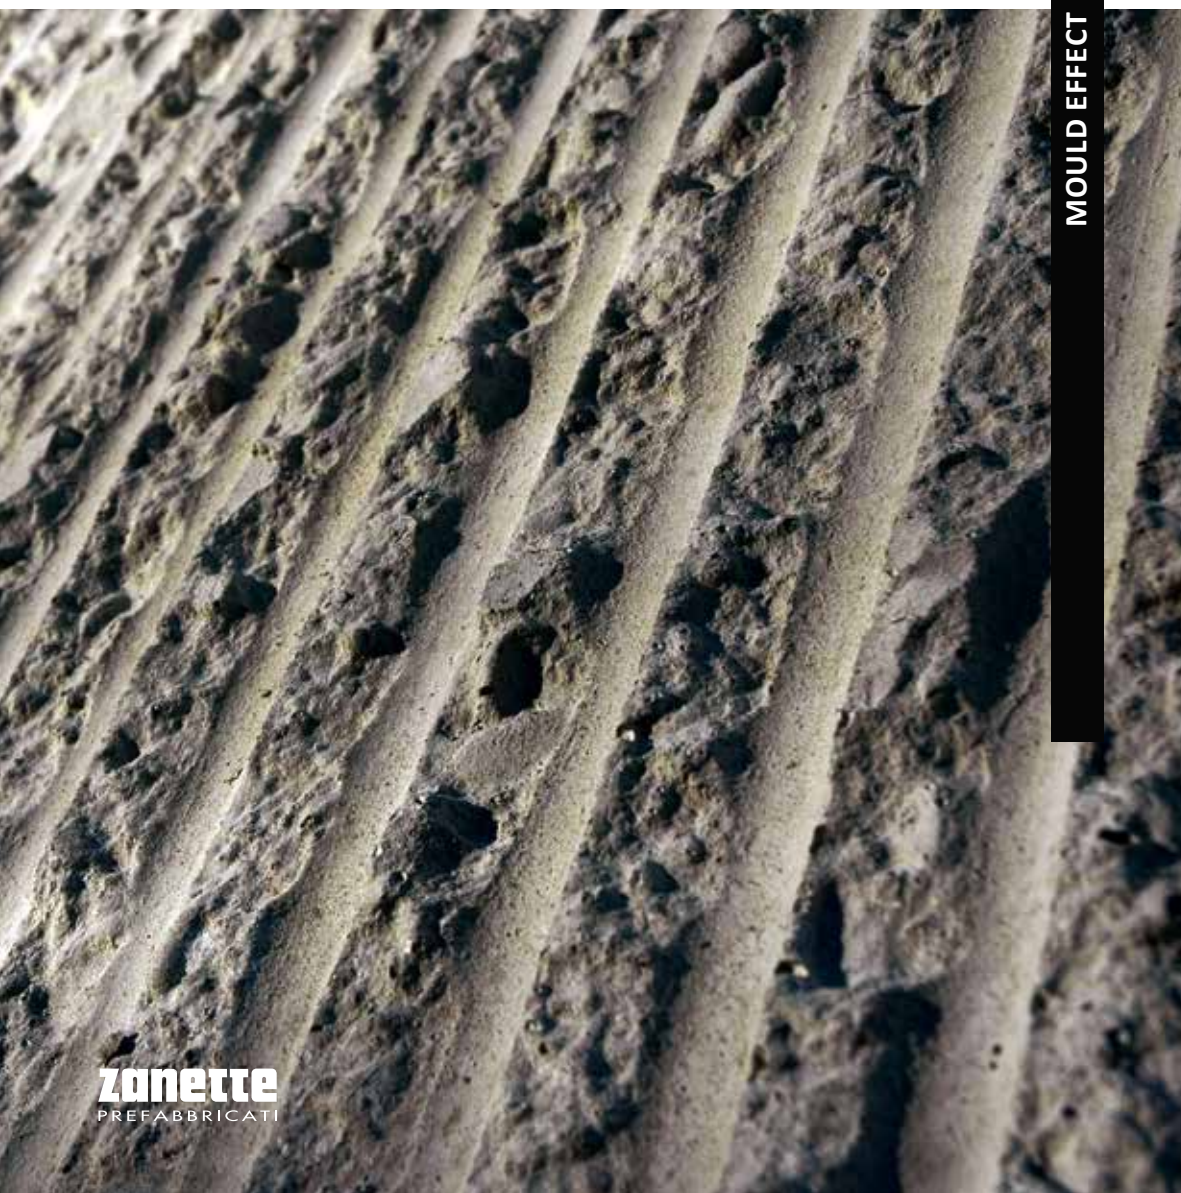

Mould effect

By using specific moulds it is possible to obtain very customised finish results. It is also possible to obtain unique effects by combining various materials together at will.

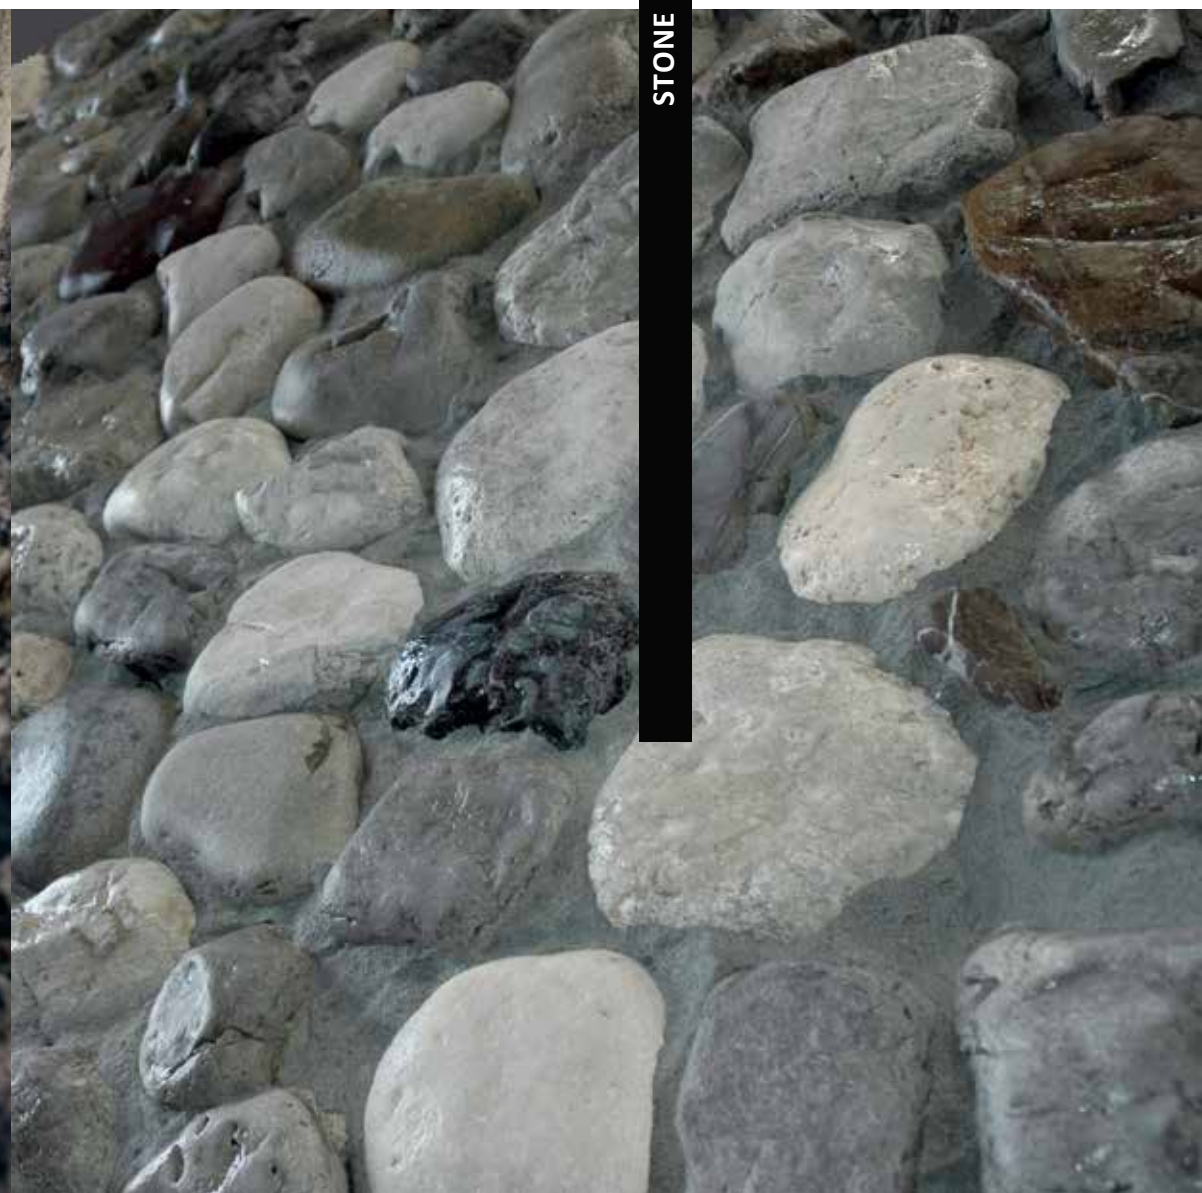

Stone

The use of natural stone recalls the handcraft work of bygone days that is now available at competitive prices and not only for cladding panels.

Facade finishes for cladding panels.

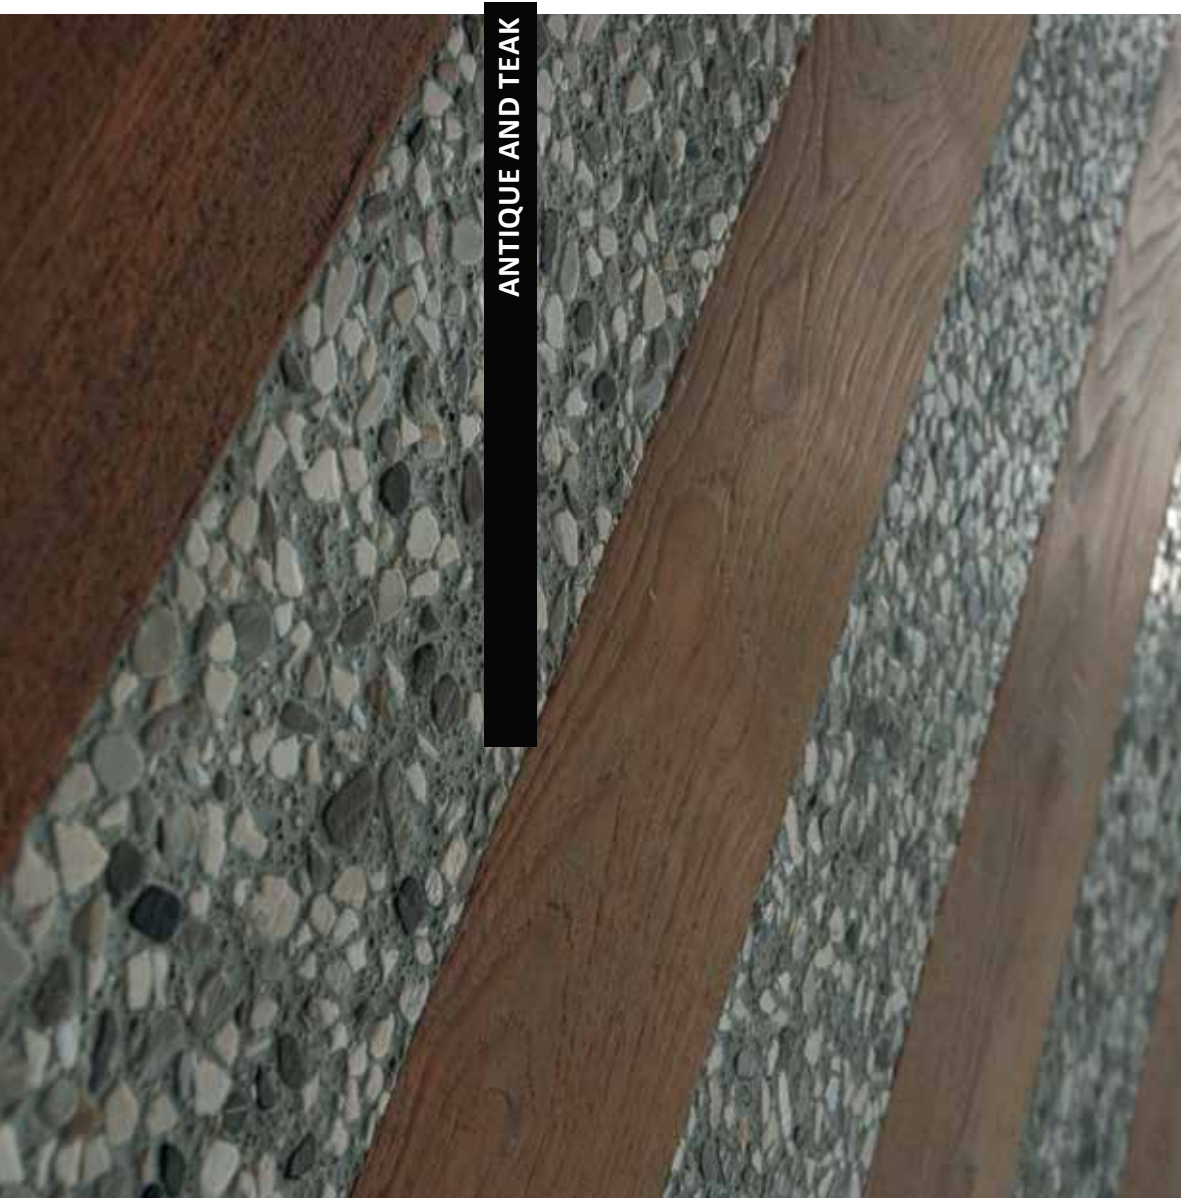

MOULD EFFECT

STONE

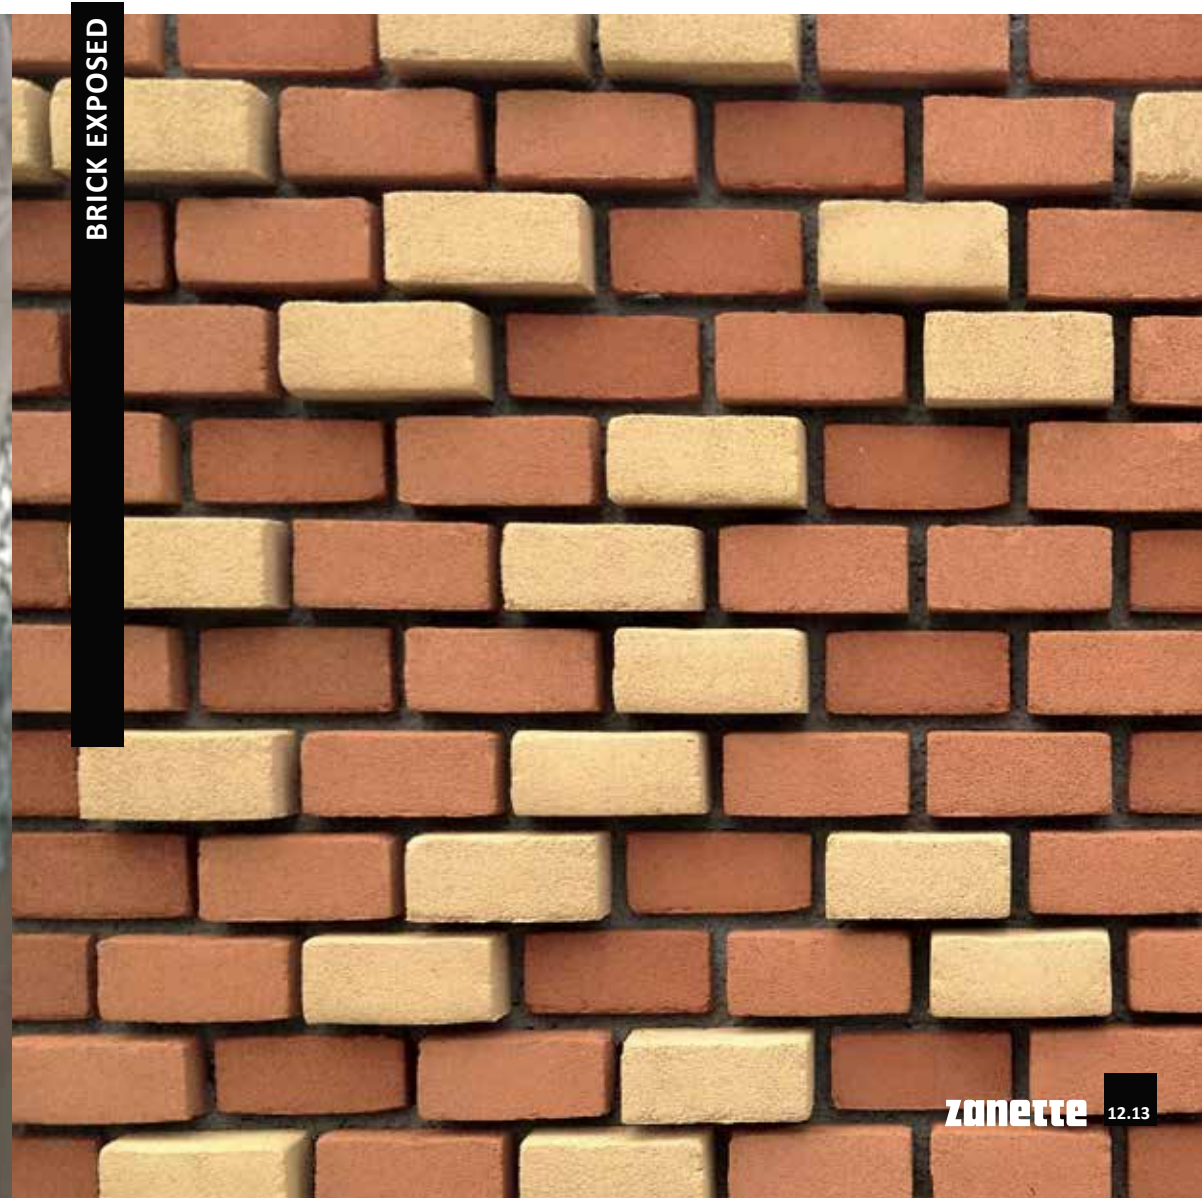

Antique and teak

A touch of refinement is obtained by combining teak with antiqued stone.

Brick exposed

Made by hand and assembled at various depths it conveys the pleasant effect of motion.
